

Airwolf 912ULS Powered Parachute Safety Advisory

Bulletin Number: POW-SB-09-25-23-5

Date: 09/25/2023

Introduction:

The Airwolf powered parachute has demonstrated the potential to accelerate at a dangerously high rate of speed on the ground under certain circumstances. This Service Bulletin is intended to raise awareness of these conditions and provide essential guidance for safe operation.

Safety Recommendations:

- **Ground Operations:** To prevent unintended acceleration on the ground, it is imperative that no large throttle handle movement occurs when no wing has been laid out. Pilots and operators should exercise extreme caution and ensure the throttle handle remains in full control during ground operations, especially when the wing is not deployed.
- **Starting Procedure:** When starting the Airwolf powered parachute, it is essential that the pilot is seated in the seat with the seat belt securely fastened. This practice ensures that the pilot is in a safe position to control the aircraft in the event of unexpected throttle movement.
- **Throttle Control:** Always remain vigilant and be prepared to take immediate action if the throttle inadvertently moves to full power. Should this occur, follow these steps:
 - Quickly disengage the throttle by returning it to idle.
 - Be prepared to deactivate the ignition system by turning off both magneto switches if necessary.
- **Taxi Speed Control:** If at any point during taxiing the ground speed becomes uncontrollable or exceeds safe limits, promptly shut down the engine by turning off both magneto switches.

Conclusion:

The safety of our Airwolf powered parachute pilots and operators is paramount. We strongly urge all users to adhere to these safety recommendations without exception. Your diligence and adherence to these guidelines will contribute significantly to a safer and more secure operating environment.

Should you have any questions, concerns, or require further assistance, please do not hesitate to contact our dedicated support team with our contact details below.

Your commitment to safety is appreciated, and we thank you for your continued trust in our products.
